Alternative

Dynamic Premium Yield PLUS Fund

ETF | Holdings as at September 30, 2026.

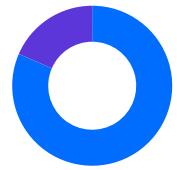

Why invest in Dynamic Premium Yield PLUS Fund ?

- Access to an alternative portfolio strategy, which includes options writing, to provide U.S. equity exposure with reduced volatility.
- Use of moderate leverage to potentially enhance total returns, including offering a higher yield, but with systematic downside protection.
- Diversification benefits provided by options writing through a low correlation to bonds and interest rates.

Growth of $10,000

Investment fund regulations restrict the presentation of performance figures until a fund reaches its one year anniversary.

Asset Allocation (%)[1]

81.5% Written Puts
18.5% Long Equities

Calendar returns %

Risk rating[3]

Low		Medium		High

[3] Risk rating measures the degree of uncertainty that an investor can handle regarding fluctuations in the value of their portfolio. The amount of risk associated with any particular investment depends largely on your own personal circumstances including your time horizon, liquidity needs, portfolio size, income, investment knowledge and attitude toward price fluctuations. Investors should consult their financial advisor before making a decision as to whether this mutual fund is a suitable investment for them.

Distributions may consist of net income, dividends, net realized capital gains, and/or return of capital. Distributions are not guaranteed and investors should not confuse a fund's distribution yield with its performance or rate of return.
Commissions, trailing commissions, management fees and expenses all may be associated with mutual fund investments. Please read the prospectus before investing.
The indicated rates of return are the historical annual compounded total returns including changes in units [share] value and reinvestment of all distributions [dividends] and do not take into account sales, redemption, distribution or optional charges or income taxes payable by any security holder that would have reduced returns. The rates of return are used only to illustrate the effects of the compound growth rate and are not intended to reflect future values of the mutual fund or returns on investment in the mutual fund. Investments in mutual funds are not guaranteed, their values change frequently and past performance may not be repeated.
R^2 is a measurement out of 100 that shows the extent to which a portfolio's movements can be explained by the benchmark's movements.
Standard deviation is a measure of volatility; it shows how broadly the Fund's returns have varied over a given time period.
Compound growth calculations are used only for the purpose of illustrating the effects of compound growth and are not intended to reflect future value of any mutual fund or returns on investment in any mutual fund.
